Haemoglobinopathy Screening

Laboratory: Haematology
Section: Haematology - UHND
Specimen: 1 x EDTA sample
Family Origin Questionnaire

Availability: Routine: Mon-Fri
STAT: NO

Turnaround Time: 30 days
Reference Ranges: All ages: N/A
Critical Value: N/A

Comments: Haemoglobinopathy screening is part of antenatal screening – the sample should be accompanied with the Family Origin Questionnaire. Further tests are determined by information given in the questionnaire, at the discretion of the BMS. An FOQ does not need to be completed by non-pregnant patients but full clinical details should be supplied. Further investigations are carried out with patient consent.
Samples should be refrigerated at 4°C.
