

	Number of probable hospital-acquired Covid-19 infections (8-14 days after admission)	Number of definite hospital-acquired Covid-19 infections (>14 days)	Number of patients who died in hospital after acquiring a 'probable' hospital-acquired Covid-19 infection	Number of patients who died in hospital after acquiring a 'definite' hospital-acquired Covid-19 infection
Dec-21	14	16	6	1
Jan-22	60	46	7	3
Feb-22	43	23	11	5
Mar-22	36	23	3	3

- The count has been based on the month that the patient tested positive which is the same rationale as questions 1 and 2. It does not necessarily mean that the patient died within the same month.
- Whilst the data confirms that the patients had Covid-19 at the time of their death it is not stating whether or not Covid-19 was the cause of death.
